

CARING FOR YOUR BIOPSY SITE

Wash hands with soap and water.

Cleanse biopsy site gently with soap and water.

Apply Vaseline or over-the-counter Bacitracin **ONLY** to the site.

(Do not use Neosporin or any other ointments, unless your provider has advised you to do so).

Cover with clean dry dressing or band aide daily for about 5 days.

Continue using Vaseline to the area until well healed.

Expect the area to have a slight red rim around it and some oozing in the middle.

Call the office if the redness around the area increases, hot to touch or red streaking occurs or the amount of oozing has increased.
